

SAFE-T-CABLE®

The Reliable, Time-Saving Solution for Fastener Security

DMC[®] is an ISO9001:2015 and AS9100D Registered Company. Scan the QR to learn more about our commitment to quality.

LIMITED WARRANTY: DMC warrants each new product sold by it to be free from defects in material and workmanship under normal use and service. DMC's obligation under this warranty is limited to the free correction or, at DMC's option, the refund of the purchase price of any such product which proves defective in normal service within ninety (90) days after delivery to the first user, provided that the product is returned to DMC with all transportation charges prepaid and which shall appear to DMC's satisfaction, after DMC's inspection, to have been defective in material or workmanship, it being understood that DMC products are not consumer products. This warranty shall not cover any damage to any product which, in the opinion of DMC, was caused by normal wear, misuse, improper operation, tampering, neglect, or accident. This warranty is in lieu of all other warranties express or implied. No warranty, express or implied, is made or authorized to be made or assumed with respect to products of Daniels Manufacturing Corporation other than those herein set forth.

THE ULTIMATE FASTENER RETENTION SYSTEM

Originally invented in 1989 by GE Aviation for use on commercial aircraft engines, Safe-T-Cable[®] quickly became recognized as a reliable, time-saving solution for fastener security. In 1993, the Society of Automotive Engineers (SAE) industry standards for Safe-T-Cable were established and DMC received the Federal Aviation Administration (FAA) classification for use of Safe-T-Cable. Aerospace Industries Association (AIA) standards such as NASM33540 and several OEM standards for using Safe-T-Cable were established thereafter. Today, Safe-T-Cable is widely used in aerospace, rail, marine, and energy industries.

In addition to installing 3 times faster than lockwire, Safe-T-Cable also produces a stronger and safer result. The userfriendly tooling guarantees a consistent installation each time it is used. Unlike lockwire, Safe-T-Cable installations eliminate sharp edges, which greatly reduces the risk of injury. Safe-T-Cable also reduces repetitive motion injuries and Foreign Object Debris (FOD). The installation and inspection of Safe-T-Cable is simple, easy to train, and rework is essentially eliminated.

INSTALLING SAFE-T-CABLE IS SIMPLE

THREAD

Thread the cable assembly through the fasteners in a positive or neutral direction.

3

4

Insert the free end of the cable through the ferrule and thread the cable through the nose of the tool.

TENSION Use the tool to apply tension to the cable.

CRIMP & CUT Crimp the ferrule, and cut the excess cable.

STANDARDS AND CLASSIFICATIONS

3

NATIONAL AEROSPACE STANDARDS

NASM33540, formerly MIL-STD-33540, "Safety Wiring, Safety Cabling, Cotter Pinning, General Practices" documents the standard practice and is controlled by AIA. This document is referenced in many contracts, drawings, and process manuals. The standard is available online at http://global.ihs.com/?RID=AIA.

SAE INTERNATIONAL

SAE International maintains and distributes the procurement and detail specifications that control the design, packaging, and performance requirements of Safe-T-Cable. SAE specifications for Safe-T-Cable include the following and are available online at https://www.sae.org/.

- AS567 Safety Cable, Safety Wire, Key Washers, and Cotter Pins for Production Systems, and Use
- AS3509 Cable, Safety, Kit, Nickel Alloy, UNS N06600
- AS3510 Cable, Safety, Kit, Corrosion and Heat Resistant Steel, UNS S32100
- AS3618 Cable, Safety, Ferrule, Elongated, Corrosion and Heat Resistant Steel, UNS S32100
- AS3619 Cable, Safety, Ferrule, Elongated, Nickel Alloy, UNS N06600
- AS3655 Cable, Safety, Kit, Corrosion Resistant Nickel Alloy, UNS N06625
- AS4536 Cable, Safety, Kit, Procurement Specification for Requirements and Use

Please contact DMC for further information on SAE specifications, publication status, or application references.

FEDERAL AVIATION ADMINISTRATION

Many FAA approved 70-XX-XX standard documents are published and maintained by major engine, airframe, and component/subsystem manufacturers. The FAA approved manual on the specific aircraft/subsystem will advise the operator/maintainer if Safe-T-Cable is approved by the original equipment manufacturer (OEM). If it cannot be determined from this or other documentation, the operator/maintainer should contact the OEM and request information concerning the use of Safe-T-Cable on that aircraft/subsystem.

OEM STANDARDS

- GE Aircraft Engines: 70-11-01-400-005 "Standard Practices Manual"
- Pratt & Whitney: PWA 316 "Safety Wire, Safe-T-Cable and Cotter-pin Installation"
- Rolls Royce: JES 138 "Locking Devices and Practices"
- Boeing: BAC 5018 "Installation of Safetying Devices"
- Airbus: AIPI 03-06-003 "Locking by Wire"

U.S. MILITARY USE

Safe-T-Cable is included in many technical manuals (TM) and technical orders (TO) used by the U.S. military and foreign military sales organizations to support aircraft, aerospace, and defense systems. Technical information required to select, install, and maintain Safe-T-Cable and the application/verification tooling is provided. General TMs/TOs that include Safe-T-Cable are listed below:

- TO-1-1A-8
- TO-1-1A-14
- TO-1-1A-15
- TM 1-1500-204-23-6
- TM 1-1500-323-24-1
- NAVAIR 01-1A-505-1
- NAVSEA MIL-STD-763
- ARMY MICOM, Drawing 13210868
- NA 01-1A-505-1
- NA 01-1A-8
- TO 00-25-255-1
- TM 1-1500-323-24-2

Several platform specific TOs and TMs feature instructions and guidelines for Safe-T-Cable. Consult the publications organization that supports your particular platform or contact DMC for further information.

DMC STATEMENT ON SAFE-T-CABLE

It is the responsibility of the installer of Safe-T-Cable to determine where Safe-T-Cable can or cannot be installed in accordance with FAA regulations, OEM standards, or Department of Defense (DOD) directives. Where authorization is required, the installer should contact the equipment OEM.

Limitation of Liability: DMC is not liable for consequential or special damages of any nature or kind resulting from the use, misuse or unapproved use of any of its products. Owners and users of DMC products assume full responsibility for instructing their employees in the proper, approved, and safe use of such products.

CABLE ASSEMBLIES AND FERRULES

MATERIALS

Safe-T-Cable is comprised of three components: the cable, the end fitting, and the ferrule. All three components are made of the same high-performance alloys typically used in aerospace fasteners. The strength and corrosion resistant properties of these alloys make Safe-T-Cable reliable and durable.

- 321 Stainless Steel (AS3510) is the standard Safe-T-Cable material used for most engine and airframe applications.
- Inconel 600 (AS3509) is appropriate for high temperature and/or non-magnetic applications.
- Inconel 625 (AS3655) is ideal for marine applications where superior corrosion resistant properties are necessary.

CABLE

The cable assembly is made up of multiple strands of high tensile strength wire with a square-formed end fitting attached to one end. The other end of the cable is electromechanically fused to form an easy threading cable end. This construction makes it stronger, lighter, and more flexible than lockwire. Safe-T-Cable is available in four diameters and in several lengths ranging from 9" – 24". Custom lengths of Safe-T-Cable are also available. The .022" cable is made with a unilay construction. The .032", .040", and .062" cables are made with a rope-lay construction. Standard, self-looping jumper, flanged, and custom branded cables are available. More details are available on pages 6-10.

FERRULES

Individual crimp ferrules are precisely manufactured to a size and hardness ensuring their compatibility with the cable assemblies and tools. Ferrules are conveniently stored in a disposable, spring-loaded cartridge for easy access. Ferrules are extracted from the cartridge by threading the cable end through the ferrule and then pulling the cable away from the cartridge. Ferrules do not have to be handled individually which minimizes the possibility of FOD. Ferrules are available in standard, elongated, or flanged configurations.

PACKAGING

Cable assemblies and ferrule cartridges can be purchased separately or together. Cable and ferrule sizes are easily identifiable by a color-coding system provided on the label and the slug within each ferrule cartridge.

IMPORTANT INFORMATION:

<<<<

When considering the cable length, be sure to add the extra cable required to engage the tension mechanism in the application tool. Add 8" for a tool with a 3" nose, and 12" for a tool with a 7" nose.

CUSTOM BRANDED CABLE ASSEMBLIES

Another value-added service available is the application of a permanent mark (unique to one customer only) on the end fitting of the cable assembly. The distinctive logo or mark becomes a reliable identification flag that can be used to trace the final assembly to a date, location, or another significant purpose. DMC custom cable assemblies are most commonly used for warranty traceability, service location verification, and/or to identify tampering.

FERRULES

Individual crimp ferrules are precisely manufactured to a size and hardness ensuring their compatibility with the cable assemblies and tools. Ferrules are sold in a cartridge of 50. No cable assemblies are included.

Cable Diameter	321 CRES	Inconel 600	Inconel 625
.022″	F10-1PKG	F09-1PKG	F08-1NPKG
.032″	F10-2PKG	F09-2PKG	F08-2NPKG
.040"	F10-3PKG	F09-3PKG	F08-3NPKG
.062"	F10-9PKG	F09-9PKG	

ELONGATED FERRULES

Elongated ferrules are ideal for installations where the clearance between the fastener head and the surface to which the fastener is attached is limited. The radius end and longer shape of the ferrules allow the tool nose to be placed in correct alignment with the fastener. Elongated ferrules are an excellent choice for low-profile fasteners or hard to reach areas. Use of a low-profile Safe-T-Cable nose is recommended for increased access. Elongated ferrules are supplied in a stainless steel cartridge.

FLANGED END CABLE ASSEMBLIES AND FLANGED FERRULES

Flanged end cable assemblies and flanged ferrules are an alternative to flat washers and greatly reduce the risk of FOD. These cable assemblies have a flanged end fitting attached to one end of the cable and are intended to be used with flanged ferrules. Flanged ferrules are sold in quantities of 50 and are supplied in two stainless steel cartridges.

	24"	C10-924FEFPKG	A10-924FEFPKG	FIU-13PKG

Flanged end cable assemblies and flanged ferrules are only available in 321 CRES material.

FLAT WASHERS

Flat washers are available to accommodate fastener holes with a diameter greater than .095" (2.4 mm), but less than .200" (5.08 mm). DMC recommends the use of flanged end cable assemblies and flanged ferrules in place of washers.

NOTE: Matching materials are required and care must be taken to restrain the washer during removal/service operations.

.062″	FW10-9	FW09-9

SELF-LOOPING JUMPER CABLE ASSEMBLIES

Self-looping jumper cable assemblies provide the user with a means of anchoring a threaded fastener to almost any structure. These cable assemblies offer a clear advantage over lockwire on turnbuckles, castellated fittings, and other applications where holes are not provided. Operators should use good judgment in selecting a secure location to terminate self-looping jumper cable assemblies.

TOOLS AND NOSES

~~~

11

Adjustable and pre-set tension tools are available in manual, battery, and pneumatic options with multiple nose lengths to accommodate most applications. Noses are interchangeable between tools for the same cable size.

#### ADJUSTABLE TENSION MANUAL TOOL SERIES

The most popular manual Safe-T-Cable tool is the adjustable tension tool. The rotary tension mechanism on this tool can be adjusted to your precise cable tension requirements. There are adjustable tension tools available to accommodate all Safe-T-Cable sizes.

#### PRE-SET TENSION MANUAL TOOL SERIES

Pre-set tension manual tools allow for singlehanded operation. When the tool reaches the factory-set tension, it automatically completes the installation. Pre-set tension tools are available for .022", .032", and .040" size cable.

#### **PNEUMATIC TOOL SERIES**

Pneumatic-powered tools are designed for high production environments. These tools are available in adjustable tension and pre-set tension options for .022", .032", and .040" size cable.

#### **BATTERY-POWERED TOOL SERIES**

## NOSES

Safe-T-Cable noses rotate 360° and are available in 1", 3", 5", 7", and 9" lengths. Low-profile noses are available for applications where the clearance between the fastener head and the surface to which the fastener is attached is limited. Elongated ferrules are recommended for use with low-profile noses.

| And in case of the local division of the loc | SPANNER WRENCH             |

#### SCT32084 Spanner Wrench

A spanner wrench is used to unlock the jam nut which allows adjustment of the indenter depth on Safe-T-Cable tools. A 7/16" wrench is used on .062" tools.

#### SCT32059SA Nose Extender

The Safe-T-Cable nose extender adds 2" in nose length and is compatible with .022", .032", or .040" tools.

#### **Replacement Tension Assembly**

| SCTR20TW-SA  | .022" tools |
|--------------|-------------|
| SCTR32TW-SA  | .032" tools |
| SCTR40TW-SA  | .040" tools |
| SCTR62TW-SA  | .062" tools |
| SCTPRM-TW-SA | SCTPRM only |

#### **Diagonal Cutters**

Both cutters feature rubber inserts which grip the cable after it is cut, reducing the potential for FOD.

**45-6N** .022", .032", and .040" **SCTD015** .062"

## FIBERGLASS SLEEVING

A tubular jacket of fiberglass sleeving should be placed over Safe-T-Cable when installed in areas where the cable will be in contact with obstructions or surfaces that may cause damage. This sleeving is rated for -70 - 600° C, has a high tensile strength, and is resistant to moisture and most chemicals. **SCTD010** is sold in spools of 50 feet.

#### ADDITIONAL ACCESSORIES

| Part #  | Description           |  |
|---------|-----------------------|--|
| 4-1501  | 9/64" Hex Wrench      |  |
| 4-1136  | 3/32" Hex Wrench      |  |
| 565B    | Drive Punch           |  |
| SCTD012 | Retaining Ring Pliers |  |

# **VERIFICATION EQUIPMENT**

DMC offers all of the equipment necessary to perform periodic testing and verification of Safe-T-Cable tools. Tensioning mechanisms are verified using the Safe-T-Cable torque verification block and a push force tester. Tool indenter verification can be confirmed based on minimum pull-off loads per cable diameter using a torque wrench and torque verification block. Minimum pull-off loads and flex limits are located in the best practices section (page 18). Refer to datasheets or contact DMC for more specific information on tool verification.

#### **Torque Verification Blocks**

SCT-TB1.022", .032", and .040" Safe-T-CableSCT-TB2.062" Safe-T-CableSCT-TB1R.022", .032", and .040" configured for<br/>right-hand reading torque wrenches

Torque Wrenches SCTD0001 .022", .032", and .040" SCTD011 .062"

#### SCTD013 Push Force Tester

Used to apply 2 lb of force to Safe-T-Cable installations when verifying cable tension on torque verification blocks

#### **MPT-250C Motorized Pull Tester**

This motorized pull tester may be used to capture and export data from tool indenter setting tests. The MPT-250C and 15-3318 grip set is used for tensile testing .022", .032", and .040" Safe-T-Cable. This motorized unit has a range

2.5 to 250 lbf and can perform pull-to-fail and force hold tests. It features a full color LCD touchscreen interface and data capture capability for exporting test data to a PC via USB or RS-232.

- Force Measurement Accuracy: +/- 0.5% Full Scale
- Force Measurement Resolution: 0.1 (lbf, kgf, N)
- Meets UL, ISO, SAE, MIL, and ASTM requirements

# **POPULAR TOOL KITS**

DMC tool kits are well known throughout the aerospace industry for quality and reliability. Our tool kits are manufactured to meet the most demanding conditions and minimize the risk of FOD. Foam inserts provide each component with a safe, designated storage space to ensure all tools and accessories are back in the kit after work is completed.

A variety of Safe-T-Cable tool kits are available including multi-tool configurations with and without verification equipment to support your specific requirements. Several of our most popular tool kits are listed on the following pages. More kits can be found on our website. If you have specific requirements, please contact DMC for a custom solution.

# **POPULAR MILITARY TOOL KITS**

Our military Safe-T-Cable kits are packaged in a soft canvas bag making them easy to carry and ideal for confined spaces. These kits are available in either .032" manual or .062" manual hydraulic options.

# **BEST PRACTICES AND RESOURCES**

Safe-T-Cable assemblies and ferrules should be installed with a Safe-T-Cable tool which has been set to meet the performance requirements of AS4536 (SAE). Users should use the tool to apply tension to the installation. Users should not pull Safe-T-Cable tight with their hands.

**Temperature Ratings:** 321 CRES Safe-T-Cable (AS3510 series, UNS S32100 CRES) should be selected for general purpose use on all applications up to 800°F. Inconel 600 Safe-T-Cable (AS3509 series, UNS N6600 Nickel Alloy) should be selected for applications where the temperature range is between 800°F and 1500°F or for electrical related applications where magnetic materials cannot be used.

#### HOLE DIAMETER CABLE SELECTION GUIDE

| Recommended<br>Hole Diameter | Safe-T-Cable<br>Diameter | Safe-T-Cable<br>Diameter | lbf (N)      |
|------------------------------|--------------------------|--------------------------|--------------|
| .037"060"                    | .022″                    | .022″                    | 30 (133.4)   |
| .060"080"                    | .032″                    | .032″                    | 70 (311.4)   |
| .070"090"                    | .040″                    | .040″                    | 110 (489.3)  |
| .080"120"                    | .062″                    | .062″                    | 280 (1245.4) |

**Maximum Span:** The maximum span between two termination points should be 6" (152.4 mm) unless otherwise specified. Routing of Safe-T-Cable may vary from that of lockwire in order to achieve a proper installation.

**Bend Limits:** The maximum bend limit of a Safe-T-Cable installation is 135°. This does not apply to hose fittings, electrical connector coupling mechanisms, turnbuckles, or similar applications where Safe-T-Cable is constrained by the shape of the component being secured.

A self-looping jumper cable assembly should be used to obtain a secure installation in applications where holes do not exist in a fastener or other part of the assembly. This method should not be used in applications where Safe-T-Cable can flip over the head of the fastener being secured.

**Flex Limits:** Maximum flex limits between termination points are stated on the following table. Apply 2 lb of pressure to mid-span when inspecting flex limits.

| А               | В                 | С                |
|-----------------|-------------------|------------------|
| 0.5" (12.7 mm)  | 0.125" (3.18 mm)  | 0.062" (1.59 mm) |
| 1.0" (25.4 mm)  | 0.250" (6.35 mm)  | 0.125" (3.18 mm) |
| 2.0" (50.8 mm)  | 0.375" (9.52 mm)  | 0.188" (4.76 mm) |
| 3.0" (76.2 mm)  | 0.375" (9.52 mm)  | 0.188" (4.76 mm) |
| 4.0" (101.6 mm) | 0.500" (12.70 mm) | 0.250" (6.35 mm) |
| 5.0" (127.0 mm) | 0.500" (12.70 mm) | 0.250" (6.35 mm) |
| 6.0" (152.4 mm) | 0.625" (15.88 mm) | 0.312" (7.94 mm) |
